“

“Innovation as a reason for being”

Tomàs Mulet · Founder of Packfeeder

Founded in 2002, Packfeeder specialises in designing and manufacturing of unscrambling solutions, orienting systems and bottle rinsing amongst others.

Located in Terrassa, within the metropolitan area of Barcelona, Packfeeder provides service to pharmaceutical, cosmetics, and personal care sectors amongst others.

Ingenious Design

The patented systems by Packfeeder are unique on the market thanks to its simple and intuitive design.

Team

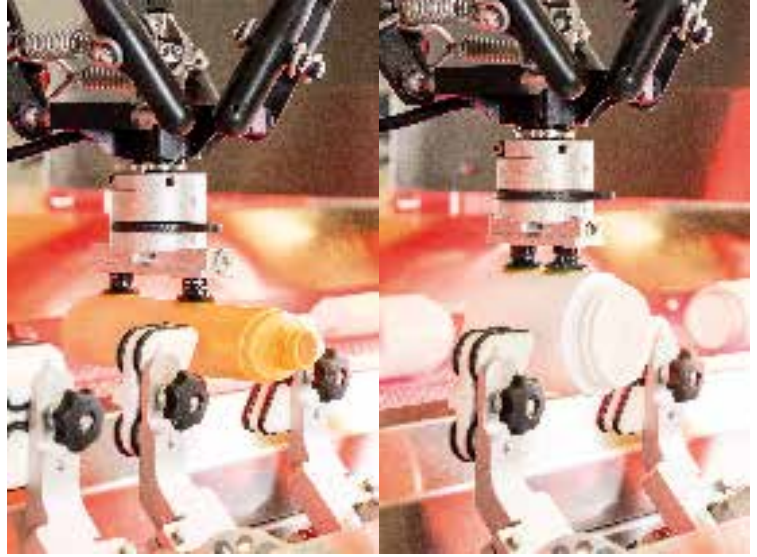

Packfeeder counts with a team of experts who have unscrambled millions of containers and objects.

Innovation

Packfeeder's DNA is based on the search for new challenges, the attention to detail and a constant desire for innovation.

Sectors

Pickfeeder Series robotic unscramblers can work efficiently with packages and objects of very different volumes and geometries, from small dimensions of 3-4ml to larger packages of more than 1L, at a wide range of speeds that can reach 500 u/min.

Advantages

Once more, the Packfeeder team goes one step further in the unscrambling containers' world by developing the pickFeeder series. This robotic bottle unscrambler may be configured by one, two, three or even four robots offering a range of applications and possibilities. The combination of delta robots with an intelligent track system makes the Pickfeeder the equipment with the most versatile automatic changeover in the market by optimizing the performance of the intelligent systems that composes it and guaranteeing the stability of the containers delivered to the line.

Taylor made solutions

Close to Zero changeover

Maximum versatility

Do It Yourself

Permanent bottle vision

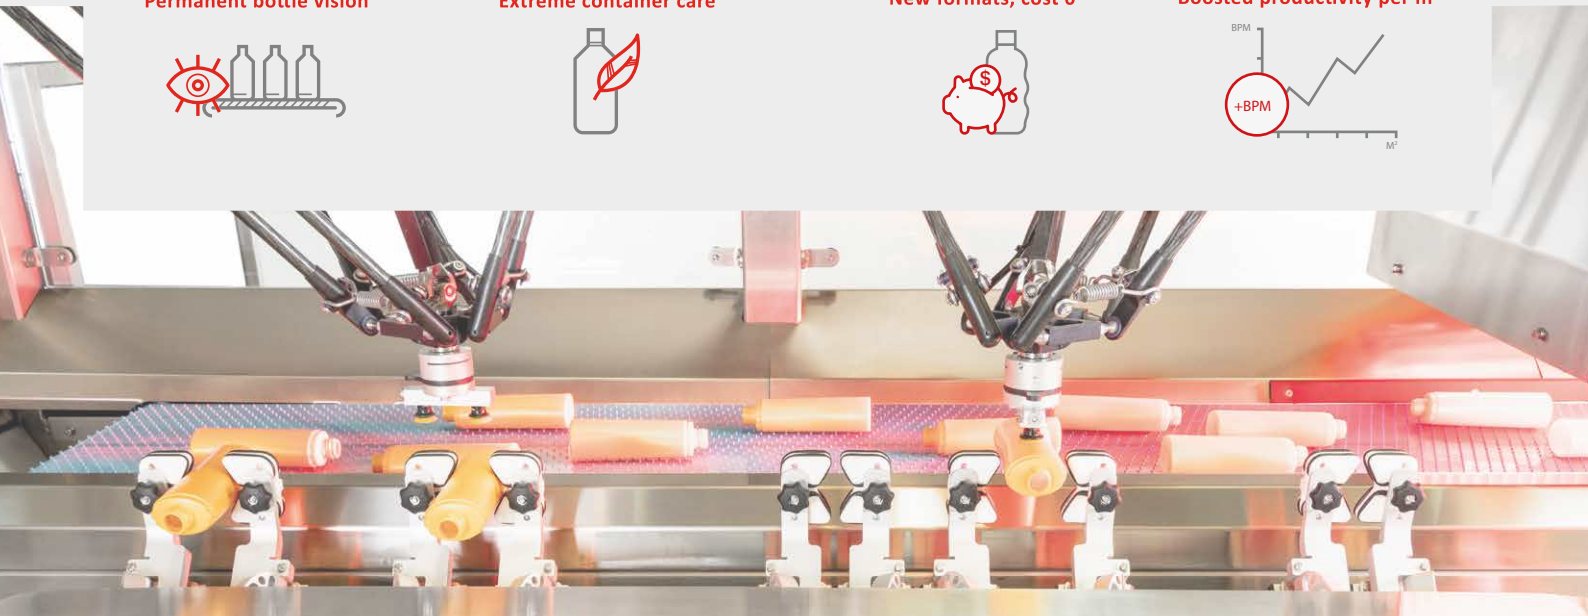

Extreme container care

New formats, cost 0

Boosted productivity per m²

RANGE OF PICKFEEDER UNSCRAMBLERS

The most versatile
and complete range

Versatility

—
Great adaptability to any container and geometry.

Immediate format changeover

—
No adjustments or settings, for multi-format lines.

New formats at 0 cost

—
New containers won't require specific format parts or complex configurations.

The range made by our models including one or several robotic units allows to adapt the equipment to the different needs of each project and to increase the efficiency of each production line.

All of them have an automatic format changeover and an extraordinary versatility that allows them to work with an infinite number of products, customized to the needs of each customer.

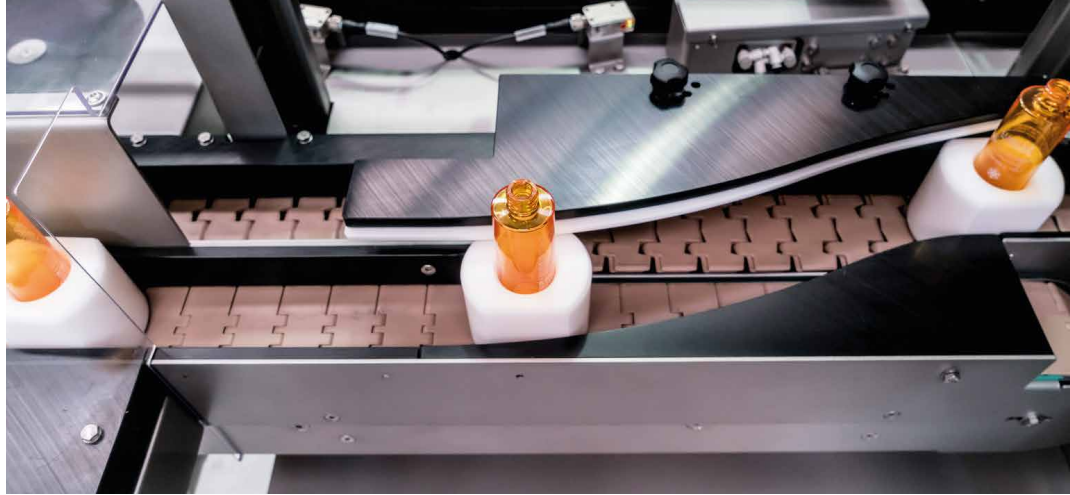

Complementary solutions

Puck loader

— This module adapts the Pickfeeder sorter to a packaging line that uses pucks to transport the bottles. This puck system does not require additional modules or space in the packaging area.

Bottle orientation

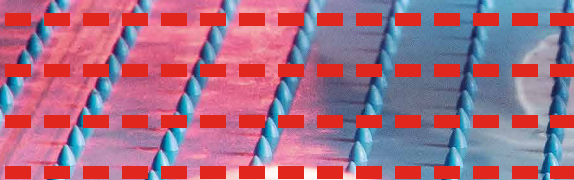

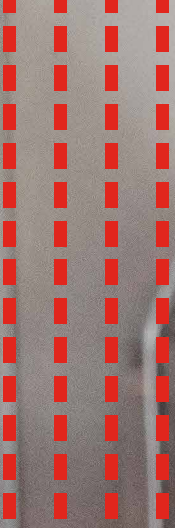

— Whether it is because the container has a handle, serigraphs or simply geometries that make it asymmetrical, the Pickfeeder system integrates the orientation function efficiently within the equipment itself, without requiring additional space on the line.

Bottle cleaning

— These modules meet the needs of packaging lines, especially in demanding environments where high hygiene requirements are a needed.
